Solutions Workspace

What It Was

A product design initiative on Solutions Workspace — the internal platform giving Salesforce Solution Engineers (SEs) Content, Demos, and Value capabilities — spanning feature design work, activity logging/reporting, and an insights-driven UI improvement effort, before the team transitioned focus toward Project Lotus 1 2 .

Wins Across Salesforce

- Delivered the **next generation of SE activity logging and reporting** — work explicitly credited with helping "Solutions be productive, faster, and easier than ever before".
- Ran direct user feedback programs, engaging the SE user base to shape feature direction rather than designing in a vacuum 3 .
- Delivered a completed "SW Onboarding + project (Insights, UI improvement)" workstream, logged as a completed FY25 key achievement.
- Activity Editor — the logging capability embedded as a tab in Org62 — reached roughly **5,500 users** logging their activities, per a later Solutions Workspace team update reflecting on that area's continued reach 4 .

Metrics of Success

- Peer feedback from the Solutions Workspace product lead rated overall work, collaboration, and user-need fulfillment all as **Excellent: Consistently exceeded expectations** for "Solutions Workspace Feature Design".
- That feedback specifically praised "the consistent level of high quality work he produced on a daily basis" and initiative "taking the initiative and helping out with running feedback programs and engaging with our user base directly to help shape the work".
- Called out by name in a 6th work-anniversary recognition message as delivering "significant impact on helping Solutions be productive, faster, and easier than ever before," with the SW-to-Project-Lotus transition described as "remarkable".
- Logged as a **Complete** FY25 UX project ("SW Onboarding + project") in the team's key achievements tracker.

My Role

Feature designer on Solutions Workspace, owning UI improvement design work and insight-driven onboarding design, and personally running direct feedback programs with SE end users to validate direction before committing to design. Also contributed to the adjacent activity logging & reporting capability (Activity Editor) that became core to Org62.

Who I Interacted With (Roles, Not Names)

- Product Lead, Solutions Workspace (design partner and peer reviewer)
- Solution Engineers / end users (direct feedback-program participants and research interviewees)
- Team Manager / UX Lead (visibility, anniversary recognition, workload transition planning)
- Solutions & Builder CoE leadership (later stakeholders on SW's evolution toward SW 2.0 and an Agentic-first experience)

How My Role Impacted the Project's Success

- Running **direct feedback programs** with SEs meant feature design decisions were grounded in real user input rather than assumption — the exact behavior singled out in peer feedback as going beyond expectations.
- Consistent daily output quality on feature design work built enough trust with the Solutions Workspace product lead to earn top-band ratings across every review category 3 .
- The activity logging/reporting work contributed to a capability that scaled to ~5,500 active users in Org62, giving the SE org lasting reporting infrastructure well beyond the initial project.
- Successfully wound down and handed off Solutions Workspace design ownership while transitioning onto Project Lotus, described by leadership as a "remarkable" transition — reflecting smooth continuity rather than a dropped thread 1 .
